Hiring Team – Oracle Cloud Infrastructure
Oracle, Singapore

Re: Program Manager 4 – Inventory Optimization (Singapore)

Dear Hiring Team,

I am writing to apply for the Program Manager 4 – Inventory Optimization role at Oracle. Delivering hardware to OCI data centers on time and right first time, while keeping inventory lean, is exactly the kind of problem I enjoy: it sits where supply chain, logistics, quality and site readiness meet, and it rewards people who can connect all of them.

My background is in supply chain and operations, where I have led work from purchase order through to delivery and owned the results end to end. I am used to spotting blockers early — supplier constraints, transport delays, quality or regulatory holds, site readiness — and working with each function to clear them before they affect the delivery date. I bring the same discipline to inventory: improving forecasting and allocation, and reducing excess through reuse and redeployment.

Three parts of the role stand out to me:

- **End-to-end execution.** I take ownership of the full order lifecycle and build clear, repeatable operating mechanisms with Planning, Supply Chain, Logistics and Delivery teams, so that issues are escalated early and resolved quickly.
- **Automation and visibility.** I like replacing manual, fragmented processes with streamlined workflows and reliable data flows, and turning them into KPIs and executive-ready dashboards covering cycle time, reuse, excess reduction and cost-to-serve.
- **Supplier and stakeholder partnership.** I hold suppliers to high standards through performance monitoring and constructive feedback, and I build trusted relationships across business lines to influence decisions on cost, technology and continuity of supply.

I am comfortable working with senior stakeholders, managing ambiguity at scale, and balancing speed, cost and risk in a fast-moving cloud infrastructure environment. I am also keen to contribute to Oracle's growth in the Asia-Pacific region from Singapore.

Thank you for considering my application. I would welcome the opportunity to discuss how I can help Oracle deliver capacity faster while driving down excess inventory and cost-to-serve.

Kind regards,

Maxence Bougourd
